

Developed to meet the needs of educational institutions, InnuxAcademy enables monitoring of attendance of teachers and students. This software manages the working hours of trainers, limiting them to credits/hour per pre-established courses.

Its online application allows you to generate real-time alerts, related to entrance delays and anticipated exits from teachers and/or students.

This solution works in conjunction with the online version of the NuxPro terminal, enabling real-time processing, validation and submission of appropriate feedback on terminals' screen. **Features**

- User and profile management
- Teacher and student management
- Courses and classes management
- Student and teacher schedules management
- Real time warnings about entrance delays and anticipated exits from students and teachers

- Teacher attendance reporting
- Student attendance reporting
- Teacher hour credit control
- Software language- C# Microsoft .NET Framework
- Database - Microsoft SQL Server 2005/2008
- Multi-company
- Multi-post
- Multi-user
